

Version 2.0

Quick Start Guide

This guide gets you started with a typical installation for IBM Rational Team Concert.

National language version: To obtain the Quick Start Guide in other languages, access the PDF files on the Quick Start CD.

Product overview

IBM® Rational® Team Concert is a team collaboration tool that is built on a scalable, extensible platform that seamlessly integrates tasks across the software lifecycle. Many aspects of the software development lifecycle are integrated, including iteration planning, process definition, source control, defect tracking, build management, and reporting.

1 Step 1: Access your software and documentation

For details about downloading the product and getting license keys and activation kits, see: <http://www.ibm.com/software/rational/support/licensing>.

For complete documentation, including installation instructions, see the Rational Team Concert Information Center at <http://publib.boulder.ibm.com/infocenter/rtc/v2r0m0/index.jsp>.

2 Step 2: Evaluate your hardware and system configuration

For information about system requirements, see the *Release notes* topic at http://publib.boulder.ibm.com/infocenter/rtc/v2r0m0/index.jsp?topic=/com.ibm.team.install.doc/topics/rtc2_release_notes.html.

3 Step 3: Install Rational Team Concert

Detailed instructions for installing Rational Team Concert are available at http://publib.boulder.ibm.com/infocenter/rtc/v2r0m0/index.jsp?topic=/com.ibm.team.install.doc/topics/c_installation_overview.html. Perform the following steps to install and configure Rational Team Concert:

1. Plan the installation. See the *Planning the installation* topic.
2. If you are upgrading from a previous release, see the *Upgrading to Rational Team Concert 2.0* topic.
3. Install Jazz™ Team Server.
4. Install the database management system that you will use as the Jazz repository. Rational Team Concert includes Apache Derby and DB2® Workgroup Server Edition. You can also use DB2, Oracle, and SQL Server databases.
5. Configure the database to work with the Jazz server. See the *Setting up the database* topic. No configuration is necessary for the Apache Derby database.
6. Create the database tables for the Jazz Team Server database. See the *Creating the Jazz Team Server database tables* topic. If you use the Apache Derby database, you do not need to create tables.
7. Start the Jazz Team Server. See the *Starting the server* topic.
8. Run the Setup Wizard. The Setup Wizard guides you through the process of creating a project; creating user accounts; assigning licenses to users; and assigning users to project teams. The default URL for the Setup Wizard is: <https://localhost:9443/jazz/setup>.
9. Install the Rational Team Concert client. See the *Installing Rational Team Concert client* topic.
10. For the Express, Standard, and Enterprise editions, optionally install the Rational Team Concert Build System Toolkit. See the *Installing the Build System Toolkit* topic.
11. For the Standard and Enterprise editions, optionally install and configure the ClearCase® Connector, which supports flexible interoperability between Jazz source control and Rational ClearCase. See the *Installing Rational Team Concert ClearCase Connector* topic.
12. For the Standard and Enterprise editions, optionally install and configure the ClearQuest® Connector, which supports flexible interoperability between Jazz work items and Rational ClearQuest change requests. See the *Installing Rational Team Concert ClearQuest Connector* topic.

4 Step 4: Install the Server Activation Key

By default, Rational Team Concert is installed with a trial license. To convert the license to a permanent license, you need to install the Server Activation Key for the release. To install the Server Activation Key from the product DVD:

1. On the product DVD, navigate to the **keys** folder.
2. Copy the appropriate .jar file to a folder on your computer. This .jar file contains your Server Activation Key.
 - jazz_team_server_express_release.jar (for the Express edition)
 - jazz_team_server_standard_release.jar (for the Standard edition)
 - jazz_team_server_enterprise_release.jar (for the Enterprise edition)
3. For details about uploading activation keys, see the *Managing license keys* topic at <http://publib.boulder.ibm.com/infocenter/rtc/v2r0m0/index.jsp?topic=/com.ibm.team.repository.web.admin.doc/topics/tmanagelicensekey.html>.

If you downloaded Rational Team Concert from the IBM Software and Services Site, download the Server Activation Key file from the IBM Rational License Key Center (<http://www.ibm.com/software/rational/support/licensing>). Then install the key by following the instructions in the *Managing license keys* topic.

If you purchase additional Rational Team Concert client licenses from the IBM Software and Services Site, download the Contributor and Developer Client Activation Key files from the IBM Rational License Key Center. Then install the keys by following the instructions in the *Managing license keys* topic.

For details about installing and configuring floating client access licenses, see the *Managing floating client access licenses* topic at <http://publib.boulder.ibm.com/infocenter/rtc/v2r0m0/index.jsp?topic=/com.ibm.team.repository.web.admin.doc/topics/tmanagefloatinglic.html>
