Linkset Viewer

This tool is designed to show the database structure through evaluating the linksets, the tool can show the modules linked in a particular link module or can work specifically from a source module and recurse outwards

To install the utility download the file using the following link, then simply run the executable. This will place a specialist shortcut on your desktop, which you should use to test the tool. You may wish to modify the shortcut if you have specialist doors servers or use your own project and module addins. You can also choose to download the Help file separately (note that the help file is included in the tool download)

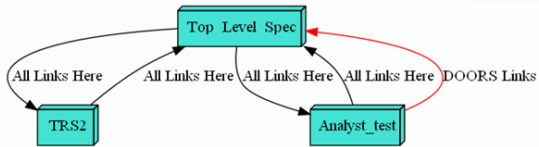

[Download Linkset Viewer from Here](#)

[Download Linkset Viewer Help File](#)

The tool will install a new shortcut, on firing it you should see a menu as follows on the database window

The tool has a help file installed with it, you should use this to see what it can do for you. The tool will display linksets in png format. Very complex graphs and relationships can be modelled by courtesy of the powerful freeware graphing tool graphviz which underlies the LinksetViewer.
