Application Servers Notes

1.
 - Excludes the Liberty profile configuration option.
 - WebSphere Application Server support for CLM is 64-bit only to align with 64-bit server platforms.
 - WAS 8 was bundled with CLM 4.0.1 and 4.0.2. Users who are upgrading from these versions are entitled to continue using WAS 8 versions as long as that version is supported by CLM.
 - There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5 .
2. There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5 .
3. *CLM supports both traditional WAS and the Liberty profile on z/OS. WAS 8.5.5 Liberty is bundled in the SMP/e packaging*
4.
 - CLM supports WAS ND but not for high availability clustering.
 - There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5.
5. Tomcat 7.0.59 is required, because of a fix for TLS.
Tomcat is bundled with CLM, but is not supported on IBM i.
Tomcat may be deprecated in a future release in favor of support for WebSphere Liberty.
6.
 - *CLM supports WAS ND but not for high availability clustering.*
 - *There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5.*
7.
 - Excludes the Liberty profile configuration.
 - WAS 8.5.5 is bundled with CLM. WAS bundles are only available on Passport Advantage and in the CLM Media (not on Jazz.net).
8.
 - Excludes the Liberty profile configuration option.
 - WAS 8.5 was bundled with the CLM 4.0.3 to 4.0.6 media. Customers upgrading from CLM 4.0.3 to 4.0.6 are entitled to continue using WAS 8.0.x as long as CLM supports those versions.
 - There is a known issue with BIRT reports running WAS v8.0.0.x and v8.5.x please see this [Tech Note](#) for WAS patch. This issue is fixed in WAS 8.5.5 .
9. Currently supported for z/OS only.
The WAS installation bundles the web server, so specific web server version support is not listed in this report.

Databases Notes

1. New for 4.0.3
2. Requires Oracle Java Database Connectivity (JDBC) ojdbc6.jar.11.2.0.3 or higher.
3.
 - New for 4.0.3
 - DB2 Express Edition 10.1 - For small teams (of 50 developers or less)
4.
 - New for 4.0.3
 - DB2 ESE 10.1 is bundled for CLM products
 - Clients upgrading from a previous version of RTC or CLM are entitled to continue using that version of DB2. New customers are entitled only to DB2 ESE 10.1
 - DB2 ESE 10.1 with HADR is supported for Clustering
 - The DB2 HADR functionality is included and can be used with the Limited Use Workgroup and Enterprise Server Editions. However, there must be entitlement coverage for the secondary/standby server. There is a 1:1 entitlement ratio for DB2 with the entitlement purchased by the customer of the bundling product. For eg. 500 PVUs of Portal entitles customer to use a maximum of 500 PVUs of DB2 in support of Portal. The entitlement requirement for the standby server depends on the standby configuration used, and is defined in the DB2 license. ie. Hot standby requires equivalent entitlement as the Primary. Warm standby requires 100 PVUs/25 AUs, regardless of Primary. Cold standby server is free. Definition of hot/warm/cold standby configurations is also in the DB2 license.
5. Oracle not supported for z/OS or IBM i
6. Requires Oracle Java Database Connectivity (JDBC) ojdbc6.jar.11.2.0.3 or higher.
7. For RRDI 32-bit database client library would be required, though the database server is 64-bit.
8. The CLM products bundle Derby. For Evaluation purposes only, or for small teams of 10 users or less. Not to be used for benchmarking performance.
9. DB2 Express Edition is supported for small teams only (of 50 developers or less).
10. JTS Setup for Microsoft SQL Server does not support Integrated Authentication. You will be unable to install CLM in your environment. Ensure that server security is in mixed mode. To validate this, check server security -- it should be set to SQL Server and Windows Authentication Mode.

Eclipse Runtime Environment Notes

1. The RTC Client bundles IES 3.6.2.3 or 4.2.2.1 (two installation options). You may also use the 4.2.2.1 installation to install RTC via p2 install over Eclipse 4.4 or 4.4.1.
2. The RTC Eclipse client supports IES 3.7.2.2 for Java 7 development
3.
 - IES 3.6.2.3 is bundled with the CLM Server and with the RTC Eclipse Client.
 - The CLM Server uses the Eclipse Runtime, Equinox and EMF.
 - The RTC Client bundles IES 3.6.2.3 or 4.2.2.1 (two installation options). You may also use the 4.2.2.1 installation to install RTC via p2 install over Eclipse 4.3.2.
 - If you are installing the Rational Team Concert Client into an existing instance of Eclipse IDE 3.6, please read [this TechNote](#)
4. The RTC Client bundles IES 3.6.2.3 or 4.2.2.1 (two installation options). You may also use the 4.2.2.1 installation to install RTC via p2 install over Eclipse 4.4. For IBM Eclipse 4.4 SDK, there are no translations available for any new strings added in 4.4.
5. The RTC Client bundles IES 3.6.2.3 or 4.2.2.1 (two installation options). You may also use the 4.2.2.1 installation to install RTC via p2 install over Eclipse 4.4, 4.4.1 or 4.4.2.

3. Chrome does not provide an ESR release - they typically provide a new release every 6 weeks. To support this, CLM will regularly support the current release of Chrome and the two prior versions. The versions supported for any particular CLM release are based on the Chrome versions available at the time of the CLM GA.

Change and Release Management Notes

1. Rational Synchronization Server is used for integration with Change and Synergy.
2. Synergy integrates with RTC via Rational Synergy For Rational Team Concert Interface.
3. Change integrates with RTC, RQM, RDNG. Change and Synergy are closely linked and share the same repository. For RTC that integration is made via Rational Synchronization Server. For the RQM and RDNG integrations Change uses OSLC.

Collaboration Notes

1. HP ALM and QC integration provided via RLIA. See Rational Lifecycle Integration Adapters (<http://www-03.ibm.com/software/products/en/ratlia>) regarding specific versions supported.
2. JIRA integrates with RTC, RQM, and RDNG via RLIA. See Rational Lifecycle Integration Adapters (<http://www-03.ibm.com/software/products/en/ratlia>) regarding specific versions supported.
3. Git integration is for RTC only.
4. RLIA enables integrations with Jira, GIT, HP ALM and QC, and many others. See Rational Lifecycle Integration Adapters (<http://www-03.ibm.com/software/products/en/ratlia>) for additional details.
5. Git integrates with RTC via RLIA. See Rational Lifecycle Integration Adapters (<http://www-03.ibm.com/software/products/en/ratlia>) regarding specific versions supported.

Virtualization Management Notes

1. Application Tier only.

Glossary

Deployment unit	<p>Deployment Structure identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure.</p> <ul style="list-style-type: none">• The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile.• Deployment units may be further divided into deployable components <p>Desktop deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications.</p> <p>Server deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications.</p> <p>Agent or client deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent or client deployment units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services.</p> <p>Mobile deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.</p>
Prerequisite minimum	The minimum maintenance level that is required for the prerequisite to work with the product.
Product minimum	The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.
Supported software minimum	The minimum maintenance level that is required for the supported software to work with the product.
